

ABSTRACT

PROCESS FOR PREVENTING FRAUDS WITH REGARD TO A TAXI
EQUIPPED WITH AN ELECTRONIC TAXIMETER

5 Process for preventing frauds with regard to a taxi
equipped with an electronic taximeter (1) possessing a
"for hire" position and a tariff position, which is
associated with a printer whose job is to print, at the
end of each trip, a receipt intended to be given to the
10 customer, said printer having at least its printing
head (20) mechanically separate from the taximeter (1),
but being electrically connected to it, which consists
in detecting the occurrence of a disconnection of the
printing head (20) of the printer with respect to the
15 taximeter (1), and as the case may be:

- ♦ if the disconnection occurred while the
taximeter is in the "for hire" position, in
prohibiting the subsequent switching of the
taximeter into the tariff position, for as long
as this disconnection endures;
- 20 ♦ if the disconnection occurred while the
taximeter is in the tariff position, in
triggering an antifraud action.
